## **Industry - Agricultural Products**

---

### **Scope of the Report**

---

## **Market - Food Products**

---

The market study aims at estimating the market size and the growth potential of this market. Topics analyzed within the report include a detailed breakdown of the global markets for almond oil market by geography and historical trend. The scope of the report extends to sizing of the almond oil market market and global market trends with market data for 2024 as the base year, 2025 and 2026 as the estimate years and forecast for 2027 with projection of CAGR from 2027 to 2032.

Product shipments include the total value of all products produced and shipped by all producers. For selected products, this can represent value of receipts, value of production, or value of work done. Market data is provided in U.S. dollar value at global and regional levels, as well as local currencies for all countries.

# Users' Guide

---

## Report Coverage

The report focuses a detailed calculation of original equipment manufacturers and the related system providers. The study forecasts the market value of the almond oil market market.

Published annually, this report provides a unique and accurate estimate on market sizing for this equipment/material using a proprietary economic model that integrates historical trends (horizontal analysis) and longitudinal analysis of incorporated industries (vertical analysis).

Regional summaries include North America, Europe, Asia-Pacific, Latin America, Africa, and Middle East. Percent shares are presented for each region as a share of the global market.

Product shipments values are also broken down by geographic areas in the countries in the report for regions, districts, provinces, states and cities.

This report does not list key players/companies in the market but focuses on a top-down and outlook view of the market despite the existing and entering of market companies.

## Benefits of the Report

This report is primarily aimed at business professionals in fields related to the market. These may include manufacturers and their suppliers, financiers and investors, researchers with backgrounds in the market, marketing and sales professionals, and others.

This report may also prove valuable to professional analysts, investors, public policy advisors and others who are seeking a better understanding and definition of how almond oil market fit into the broader global market.

The report will help the market leaders and new entrants in this market with information on the closest approximations of the revenue numbers for the overall market. This report will help stakeholders understand the competitive landscape and gain more insights to better position their businesses and to plan market strategies. The report also helps stakeholders understand the opportunities of the market.

# Methodology

---

**Market - Almond Oil Market**

---

**Industry: Agricultural Products**

---

**Sector: Food Products**

---

**Definition:** Almond oil is a popular natural oil derived from the seeds of almond trees, primarily the sweet almond (*Prunus amygdalus*). The market for almond oil encompasses various segments, including culinary, cosmetic, and pharmaceutical applications. In the culinary sector, it is prized for its flavor and health benefits, serving as a cooking oil or salad dressing. The cosmetic industry utilizes almond oil for its moisturizing and nourishing properties, making it a key ingredient in skincare products, hair care formulations, and massage oils. Additionally, the pharmaceutical sector employs almond oil for its therapeutic benefits, including anti-inflammatory and antioxidant properties. The almond oil market is influenced by factors such as consumer trends towards natural products, increasing health awareness, and the growing demand for organic and sustainable options globally.

---

# Methodology

---

## **Market - Almond Oil Market**

---

### **Market Segments**

---

Almond oil is a versatile product with various market segments catering to diverse consumer needs. One primary segment includes the cosmetic and skincare industry, where almond oil is prized for its moisturizing and nourishing properties, making it a popular ingredient in lotions, creams, and hair care products. Another significant segment is the food industry, where almond oil is used in cooking and baking, valued for its flavor and health benefits, such as high monounsaturated fat content.

Additionally, the health and wellness segment capitalizes on almond oil's nutritional benefits, promoting it as a dietary supplement. The aromatherapy sector also utilizes almond oil as a carrier oil for essential oils due to its light texture. Overall, almond oil's adaptability allows it to thrive in multiple markets, appealing to a wide range of consumers.

---

# Methodology

---

## **Market - Almond Oil Market**

### **Market Strengths**

Almond oil has gained significant traction in the market due to its numerous benefits and versatile applications. One of its primary strengths lies in its rich nutritional profile, containing vitamins E, A, and essential fatty acids, making it a popular choice in the cosmetics and skincare industries. Its moisturizing properties and ability to soothe skin irritations have led to a growing demand among health-conscious consumers.

Additionally, almond oil is increasingly recognized for its culinary uses, particularly in gourmet cooking and baking, appealing to food enthusiasts. The rise in natural and organic product trends further bolsters its market position, as consumers seek cleaner, healthier alternatives. Furthermore, the global expansion of e-commerce has facilitated broader access to almond oil products, enabling brands to reach wider audiences and enhance market growth.

---

# Methodology

---

## **Market - Almond Oil Market**

### **Market Weaknesses**

The almond oil market faces several weaknesses that can impact its growth and stability. Firstly, fluctuating raw almond prices due to climate change and supply chain disruptions can affect production costs. Additionally, the rise of alternative oils, such as coconut and avocado oil, poses competition, potentially diminishing almond oil's market share. Consumer awareness and education about the benefits of almond oil are still limited, hindering widespread adoption, especially in regions where traditional oils dominate. Quality inconsistency due to varying production standards can also deter buyers. Furthermore, the increasing demand for vegan and plant-based products may challenge almond oil's perception as a premium item. Lastly, regulatory hurdles related to labeling and health claims can complicate market entry for new players. These factors collectively contribute to vulnerabilities in the almond oil market.

---

# Methodology

---

## **Market - Almond Oil Market**

---

### **Market Threats**

---

The almond oil market faces several threats that could impact its growth and profitability. Firstly, increasing competition from alternative oils, such as coconut and olive oil, is a significant challenge, as consumers may opt for cheaper or more versatile options. Additionally, fluctuations in almond prices due to climate change and drought conditions can affect production costs and supply stability. The rise of counterfeit products and substandard quality oils poses a threat to brand reputation and consumer trust. Regulatory changes concerning food safety and labeling can also impose additional compliance costs on manufacturers. Furthermore, shifts in consumer preferences towards plant-based or sustainable oils may impact almond oil's market share. Lastly, economic downturns may lead to reduced discretionary spending, affecting luxury items like almond oil.

---

# Methodology

---

## **Market - Almond Oil Market**

---

### **Market Opportunities**

---

Almond oil presents significant market opportunities due to its diverse applications and growing consumer awareness of natural products. The increasing demand for organic and natural skincare products has positioned almond oil as a sought-after ingredient in cosmetics and personal care. Additionally, its culinary uses, particularly in health-conscious cooking, are gaining popularity as consumers prioritize healthy fats and nutrient-rich ingredients. The rise of the wellness trend further enhances almond oil's appeal in dietary supplements and aromatherapy. Moreover, expanding e-commerce platforms facilitate wider distribution, reaching global markets effectively. With the growing emphasis on sustainability, ethically sourced almond oil can attract environmentally conscious consumers. Overall, the almond oil market is poised for growth, driven by its versatility, health benefits, and alignment with current consumer trends.

## Market - Almond Oil Market

---

### Methodology

---

The Global Innovative Markets Forecast report series by Perry/Hope Partners features market sales of thousands of high-tech products and services in various industries such as transportation, hardware, electronics, electrical products, printing services and food products. The reports are published annually based on a unique methodology that uses robust data sources and detailed logarithms to estimate global markets for manufactured products. The main steps in the methodology are:

- Products and services definitions and historical data are primarily based on secondary data collected from Internet research which is updated annually. Data sources include trade association databases, trade journal articles, press releases, published research reports, and annual reports.
- Market sales for the global countries are used as a ratio to all other countries in the report by GDP and the percent of the total manufacturing sector as percent of the countries total GDP.
- Adjustments to estimates are both vertical (industry) analysis and horizontal (trend) analysis.
- Demographic breakdowns of regions, cities, states, districts and provinces are based on historical population and regional GDP data projected forward.

2026		572,444.1	2025-2026
2027		705,537.0	2026-2027
2032		1,663,715.5	CAGR 2027-2032

In 2026, sales for this product in Vietnam is forecast to be \$21.8 million dollars.

Sales are forecast to change by 23.2 percent in the next year (2026 to 2027). In 2026, sales will be 572.4 million Dongs and will change by 23.7 percent in the next year (2026 to 2027).

In 2032, sales for this product in Vietnam is forecast to be \$63.5 million dollars.

The compound annual growth rate is projected to change by 27.2 percent from 2027 to 2032. In 2032, sales will be 572.4 million Dongs and will change by 23.7 percent from 2027 to 2032.

## Market - Almond Oil Market

---

### Overview

PRODCOM statistics aim at providing a full picture at EU level of developments in industrial production for a given product or for an industry in a comparable manner across countries. This aim became more important together with the establishment of the single market in 1992, and with rapid changes occurring in Europe the statistical system had to adapt to these changes.

The acronym PRODCOM comes from the French "PRODUCTION COMMUNAUTAIRE" (Community Production). The PRODCOM list is updated each year by the PRODCOM Expert Group. The headings of the PRODCOM list are linked to those from the Combined Nomenclature (CN) used to compile International Trade in Goods statistics, which thus enables direct comparisons between industrial production statistics and trade statistics (see below). PRODCOM headings are coded using an eight-digit numerical code, the first six digits of which are identical to those of the Statistical Classification of Products by Activity (CPA) code. The PRODCOM list is therefore also fully consistent with the CPA, while further detailing the CPA product categories.

PRODCOM statistics are broken down to a detail level of almost 3900 products available in the PRODCOM list. The main indicators of the production sold during the calendar year are collected and published both in monetary (EUR) and physical (kg, m<sup>2</sup>, number of items, etc.) terms.

Eurostat releases in its database PRODCOM statistics for the EU as a whole as well as by Member State. The EU total excludes currently three EU Member States which are exempt from transmitting industrial production data given their small share in the EU total; these are Cyprus, Malta and Luxembourg.

### How are PRODCOM statistics measured?

As mentioned above, PRODCOM statistics are based upon data on manufacturing of goods produced by the enterprises on the national territory. These enterprises carry out one or more activities at one or more locations and may comprise one or more legal units. When an enterprise is active in more than one economic activity, then the value added and turnover that it generates, the persons it employs, and the values of all other statistical variables will be classified under the enterprise's principal activity. The principal activity is normally the one that generates the largest amount of value added. For PRODCOM statistics, the survey population consists of enterprises whose principal activity or one of its secondary activities was manufacturing of goods during the reference period.

PRODCOM statistics are compiled from the enterprises that cover at least 90 % of the national production per NACE class and employ at least 20 people (different thresholds may nonetheless be adopted by countries in exceptional cases). The territory covered in each country refers to the specifications of the Nomenclature of Countries and Territories for the External Trade Statistics of the Community and Statistics of Trade between Member States.

### Indicator definitions for key PRODCOM statistics

PRODCOM statistics consist of the following set of indicators:

the physical volume of production sold during the survey period,  
the value of production sold during the survey period,

the physical volume of actual production during the survey period, including any production which is incorporated into the manufacture of other products from the same undertaking.

The national statistical institutes transmit this set of indicators to Eurostat on an annual basis, six months after the end of the reference year. Data are available in both NACE Rev. 1.1 and NACE Rev. 2 classifications until 2008 reference year and from reference year 2009 onwards only in NACE Rev.2.

# Appendix

---

## Which parts of the economy does PRODCOM cover?

The PRODCOM statistics cover the industrial production (with the exception of military products and some energy products) carried out by enterprises classified within the Sections B to C of NACE Rev. 2, which include:

- Section B - Mining and quarrying
  - Division 07 - Mining of metal ores
  - Division 08 - Other mining and quarrying
  - Division 09 - Mining support service activities
- Section C - Manufacture
  - Division 10 - Manufacture of food products
  - Division 11 - Manufacture of beverages
  - Division 12 - Manufacture of tobacco products
  - Division 13 - Manufacture of textiles
  - Division 14 - Manufacture of wearing apparel
  - Division 15 - Manufacture of leather and related products
  - Division 16 - Manufacture of wood and of products of wood and cork, except furniture
  - Division 17 - Manufacture of paper and paper products
  - Division 18 - Printing and reproduction of recorded media
  - Division 19 - Manufacture of coke and refined petroleum products
  - Division 20 - Manufacture of chemicals and chemical products
  - Division 21 - Manufacture of basic pharmaceutical products and pharmaceutical preparations
  - Division 22 - Manufacture of rubber and plastic products
  - Division 23 - Manufacture of other non-metallic mineral products
  - Division 24 - Manufacture of basic metals
  - Division 25 - Manufacture of fabricated metal products, except machinery and equipment
  - Division 26 - Manufacture of computer, electronic and optical products
  - Division 27 - Manufacture of electrical equipment
  - Division 28 - Manufacture of machinery and equipment n.e.c.
  - Division 29 - Manufacture of motor vehicles, trailers and semi-trailers
  - Division 30 - Manufacture of other transport equipment
  - Division 31 - Manufacture of furniture
  - Division 32 - Other manufacturing
  - Division 33 - Repair and installation of machinery and equipment

## Legislation

PRODCOM statistics are compiled under the legal basis provided by Council Regulation (EEC) No 3924/1991 of 19 December 1991 and by Commission Regulation (EC) No 0912/2004 of 29 April 2004 implementing the Council Regulation (EEC) No 3924/91 on the establishment of a Community survey of industrial production. Additionally, a Commission Regulation updating the PRODCOM classification is available annually since 2003.

## Methodology

A summary of the methodology applied for PRODCOM statistics accompanies the data on Eurostat's website as a European Statistics Metadata System (ESMS) metadata file (prodcom\_esms). The national European Statistics Metadata System (ESMS) metadata files, employed by countries for PRODCOM statistics are available under the ESMS metadata file (prodcom\_esms).

Classifications

# Appendix

---

As mentioned above, the enterprises which are surveyed for PRODCOM statistics are classified according to their activity and assigned to a particular NACE code. The revised NACE Rev. 2 classification was adopted at the end of 2006, and is applicable to the PRODCOM Statistics since 2008 reference year. These changes in the classifications allowed a broader and more detailed collection of information to be compiled on industry, and provided the possibility to better identify new products from new areas of economic activity (such as technology-producing sectors).

Existing PRODCOM statistics presented in terms of NACE Rev. 1.1 will be maintained in the database for those users wishing to analyse historical series.

Before industrial production data collection could start, it was necessary to draw up a common list of products to be covered. Drawing up the PRODCOM list was a unique opportunity for Eurostat, the National Statistical Institutes and the European Trade Associations to work together to produce a classification that would work on the micro, national and European levels. The two main objectives of this work were to enable measuring the industrial production and to allow linking production statistics to trade statistics. As PRODCOM statistics have to be comparable with trade statistics, which are based on the CN, there had to be a close relationship between the two nomenclatures. Furthermore, the basic building blocks for PRODCOM are NACE (Rev. 2, as from 2008) and the CPA. Therefore, the PRODCOM list had to be developed in close association with these nomenclatures.

To understand how the different nomenclatures fit together, and their links to world-wide nomenclatures, it is useful to consider the diagram below which gives an overview of the revised system of integrated statistical classifications. This diagram shows the clear links between the PRODCOM list and the CN, which then links up to the HS at a world-wide level.

Diagram links: PRODCOM list, CN and HS

## Policy context

Industrial production statistics collected within PRODCOM are used as one of the data sources in a number of policy areas covered mainly by the work of the Directorate-General for Internal Market, Industry, Entrepreneurship and SMEs (GROW). The European Commission's enterprise policies aim to create a favourable environment for business to thrive within the EU, creating higher productivity, economic growth, jobs and wealth. Many of the policies that have been introduced in recent years have been aimed at reducing administrative burdens, stimulating innovation, encouraging sustainable production, and ensuring the smooth functioning of the EU's internal market.

At the European Council meeting of 26 March 2010, EU leaders set out their plan for Europe 2020, a strategy to enhance the competitiveness of the EU and to create more growth and jobs. The latest revision of the integrated economic and employment guidelines (revised as part of the Europe 2020 strategy for smart, sustainable and inclusive growth) includes a guideline to improve the business and consumer environment and modernise Europe's industrial base. Additional information about the Europe 2020 strategy can be found on the Europe 2020 website.

In October 2010, the European Commission presented a Communication on "An industrial policy for the globalisation era", establishing a strategic agenda and proposing broad cross-sectoral measures, as well as tailor-made actions for specific industries, mainly targeting so-called "green innovation" performance of various sectors. Prodcost statistics represent an important data input in order to take informed political decisions in these areas.

The central principles governing the internal market for services guarantee EU enterprises the freedom to establish themselves in other Member States, and the freedom to provide services on the territory of another EU Member State other than the one in which they are established. These central principles governing the internal market were set out in the EC Treaty. The objective of the Directive 0123/2006 of 12 December 2006 is to eliminate obstacles to trade in services, thus allowing the development of cross-border operations. It is intended to improve competitiveness, not just of service enterprises but also of European industry as a whole. In December 2006, the Directive was adopted by the European Parliament and the Council with transposition by the Member States required by the end of 2009. A comprehensive and structured listing of the legislative acts in force relating to industrial policy is available on Eurlex's website.
